After multiple requests from various experts across multiple landscapes spanning the world, I am finally revealing one of the basic psychological drills I created and use in sessions with clients of every background in society, education, and aspiration to obliterate their thinking foundation and replace it with one completely based on Nature's system of Interconnectivity; an entire vision and mindset based only on holism, on holistic problem-solving. But, before I reveal it, let us see a few examples of the necessity of such a thing; the necessity of seeing this world thru the vision and mindset of Nature, something very much akin to how the greatest thinkers saw and thought about this world.

Photography: Google Images

One of the ways the greatest thinkers across space and time were able to be such is by having the ability to see this world thru multiple lenses, differing vantage points, varying degrees. Just like the game of 3D chess where the chess board is designed on multiple horizontal levels so pieces on the bottom board can attack pieces on the middle and top boards, the greatest thinkers were able to see their surroundings, issues, and opportunities from multiple angles. The greatest thinkers were able to metaphorically lift themselves above the tremendously dense fog of the status quo that blinds almost everyone that lives and dies across the Earth so they can see above the typical limitations of human vision and mindset.

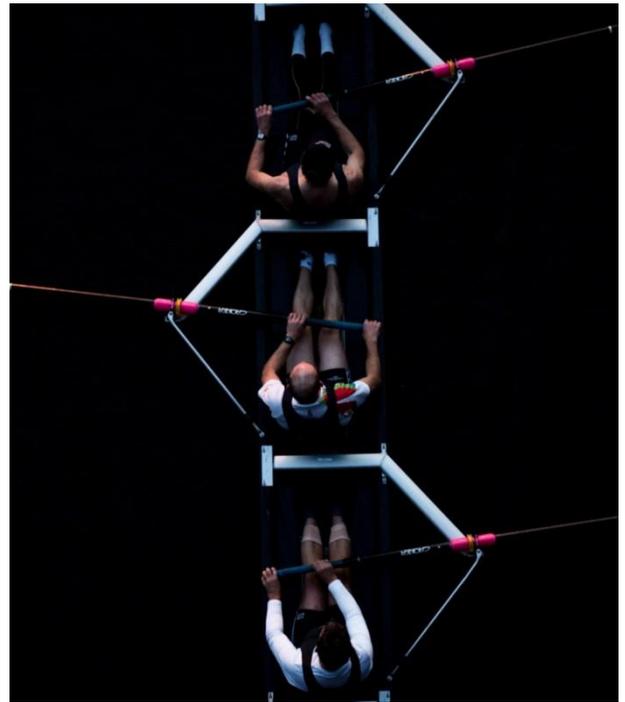

Photography: WikiMedia Commons

This principle of enhanced, elevated vision is touched upon in the movie *Mothman Prophecies*, when Alexander Leek (played by Alan Bates) tells John Klein (played by Richard Gere) about the enhanced vision and mindset of the Mothman:

"If there was a car crash ten blocks away, that window washer up there could probably see it. Now, that doesn't mean he's God, or even smarter than we are. But from where he's sitting, he can see a little further down the road."

While a non-human species naturally having a vision that can see things on a higher plane itself is not an indicator of higher intelligence when compared to humans, a human possessing such a vision would indicate higher intelligence compared to other fellow humans, leaving out any possible birth anomalies resulting in physical eyeball deformities that may lead to such vision.

Photography: Josh Calabrese

Multiple views, thinking foundations, perspectives, and worldviews all collected into one entity, into one vision and mindset immediately grants that entity tremendous power and advantage, and benefit over everyone else. This is the very reason teams exist, so to create the highest probability of success for a task within a business, university, academic entity, intelligence agency, military, or any other collective entity. For this reason you will never hear of an entire rocket being designed by just one extremely gifted rocket engineer, or an entire corporate strategy being run by just one genius strategist.

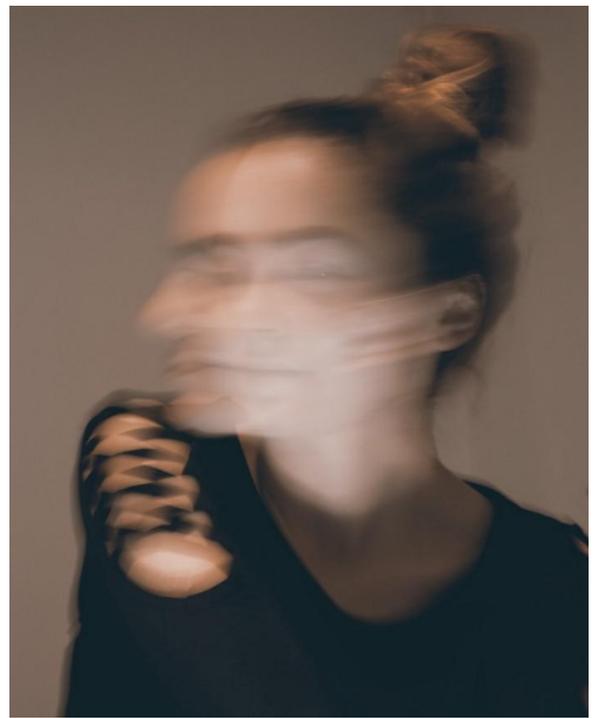

The collective power of many visions and mindsets are what is mandated for success in anything large-scale.

Photography: Rob Potter

To further illustrate the power of multiple mindsets in one being, imagine a science-fiction scenario where a mad scientist wants to create the most intelligent human ever by implanting as many mindsets into one human subject as possible. Notice this is not implanting tangible, physical, brains but intangible, non-physical, mindsets, if such a thing were possible. The mad scientist proposes this procedure because, as any non-mad scientist would agree, having as many perspectives, mindsets, thinking foundations as possible would absolutely grant a person to see the world in an entirely different manner than most humans who walk this earth ever could. Although, unfortunately, the ability to implant intangible, non-physical, mindsets into a human is not possible with our technology — at least not yet.

So, this procedure of adding as many visions and mindsets into your own is mandatory if you are to rule your world, in any arena (business, education, social). This “multiple-identity” characteristic grants you the ability needed to divorce yourself from your own vision and mindset. But, how do you accomplish this deceptively simple task of pouring multiple visions and mindsets into your own? Unfortunately, this task is notoriously difficult in itself. However, one way to accomplish it is to mimic someone, or something, that has already accomplished and is tremendously skilled at what you seek. One such entity which can see across the greatest number of landscapes, arenas, and angles ever possible is Nature.

Photography: Carolina

But, how do you do this massive preliminary task of seeing and thinking from, ideally, an unlimited number of angles as Nature does, especially since Nature has had eons of time for research and development and enhancement of this ability?

There are many things that must first be done with your thinking foundation, your vision, your mindset before you can even begin the massive task of seeing the hidden, underlying universals within Nature that help it to solve issues across unlimited realms. One way to start is by learning how others see the world, their surroundings, their problems, and opportunities, and how they navigate thru life with those variables.

One person who has an amazingly varied view of life with its surroundings, problems, and opportunities, as well as

its typically simple everyday dealings is the artistic fashionista and Instagram inspiration Mr. Levino.

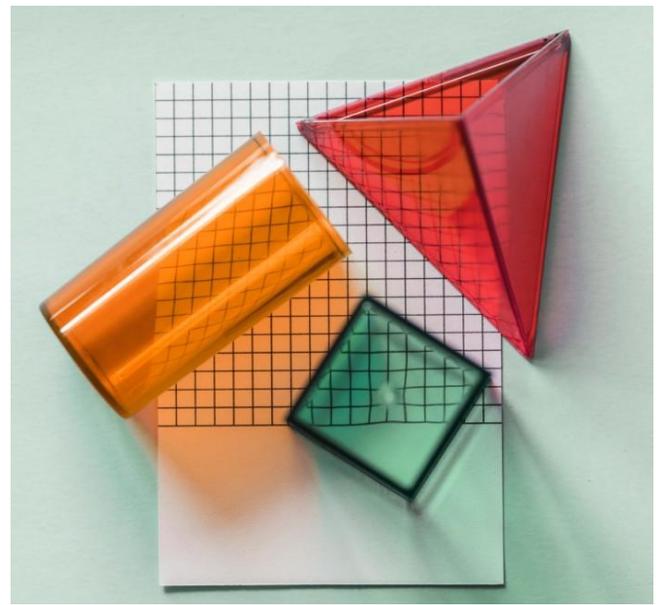

Being born with the muscular disease called Spinal Muscular Atrophy Type 2 (SMA2) might sound like a curse to many, and, in many ways, it can be. But, it also gives me a unique opportunity to prove that this disease doesn't have to be a curse.

Since I can barely lift a glass of water, I am forced to see life in a different light than most people. The key is perspective. To see a problem from every possible angle, and, with a step-by-step method, solve the problem in whatever way possible. When I'm talking about perspective I don't just mean to say "Well, someone probably has it worse than me." No. What I mean is to see the problem that needs solving from every angle, and use whatever means to solve it (within reasonable means of course).

Problem solving can sometimes be really hard, because we are so used to doing something "the right way". Sometimes though, we need to use a different approach, or "the wrong way"; so to speak. I'll give you an example from my everyday life.

Let's say there is a glass of very fine bourbon I want to reach. Maybe you would tell me to just reach out and grab it. But, what if you don't have the physical strength to do so? Then an unconventional method to get that beautiful looking drink is needed! So, I see a piece of paper and figure I can use the paper to slide it under the glass and in that way drag it closer to me. Now, I just need to reach the paper. Fortunately, it's closer to me. So, I use my beautifully deformed fingers to help my arm crawl forward and grab the paper. Now I have everything I need and I successfully slide the paper under the glass and use it to drag the glass towards me.

There we go. By stepping back for a second and allowing myself some seconds to look how to best solve this problem, we've managed fine!

Another person who has a unique view of life with its surroundings, problems, and opportunities, as well as its typically simple everyday dealings is former police officer now-turned holistic health expert and entrepreneur Steve Obregon.

Many say that law enforcement agents, for the most part, have a more rigid view on life, or perspective. This is rightfully based on the systems that are taught to them in the academy (theory) and on the street in real-world situations (practice) which tend to be quite white-and-black and inflexible. True, it is still a vision and mindset of value and success, but it's also a vision and mindset that is greatly limited. This is greatly what leads to the problems that continue in law enforcement today, e.g. incorrect actions stemming from bias.

As any averagely-educated person can probably guess, such a rigid mindset, which is still intelligent, accompanied by re-education in systems that are more flexible, or fluid, should, ideally, lead to a view or perspective that is more all-encompassing, or holistic, especially compared to the original vision and mindset. Basically, this creates an equation as noted below, albeit an overly simplified one:

Square/Rigid/Fixed/ Vision & Mindset

+ Circular/Rounded/Fluid Vision & Mindset

Well-Rounded/Holistic Vision & Mindset

Now, the question remains of what to study to acquire that circular or fluid vision and mindset. While there are many

subjects to do so, no subject or combination of subjects will ever be able to surpass the single subject of “vision and mindset” of Nature. What other subject, or system, could ever be more powerful than the one that consists of everything around us?

So, keeping inline with the power and system of Nature, I luckily decided to learn to round-out my vision via the subject of natural well-being, or holistic healing. When I was able to partner this new education with my law enforcement vision and mindset I was only then able to see the methods of creating my proprietary oil formulae for enhancing people’s body contours (abdomens, breasts, legs, and waists) that are fading or even nonexistent that I am now known for.

Because of this new more-rounded vision discovered after starting to learn about the properties of Nature, and combining it with my law enforcement mentality, I can quickly see people’s issues pertaining to their health and entire well-being. That information helps me to create more unique, targeted, and effective formulae based on Nature’s oils than many other holistic health practitioners are able to do.

While many can say it is quite obvious that seeing things from different angles is how people solve issues better and come up with new ideas, that is not the point of this article. That is simplistic. No, the point is far more specific and difficult than that. What is discussed here and in many of our work is the necessity for the concept of learning to see and think about things by looking into the system of Nature. While this is something far more difficult than what you can possibly imagine at first, it is also something that is well worth the tremendous work. I myself have only just begun to learn the “vision and mindset”, or more accurately, the system of Nature, so I can refrain from my old ways as much as possible and remember there are far more way to see and act upon things in my business, education, and everyday dealings with people. And, believe me, there is not a single greater teacher for this than Nature.

Photography: Warren Wong

As you can now possibly imagine, as noted above, and as many of my former and current clients who are both slightly educated and highly educated in various landscapes across the world will readily attest, simply adding multiple visions and mindsets into your own self may seem simple in theory, but, in practice, it is an extraordinary task and elusive goal. To help begin your journey in accomplishing this, finally, here is the drill I promised.

Lightning	Sunshine	Weather	Clouds	Raindrops	Drought	Snow	Humidity
Light	Physics	Sound	Ocean Waves	Spaceship	Guns		
Word	Conversation	Letter	Alphabet	Communique	Sound	Mail	Telephone
Email	Text Message/SMS	Chat Message					

Chairs Paintings Table Picturesque Ambiance Floor Walls Colors

Acquiring a vision and mindset based on holistic problem-solving powered by Nature’s system of Interconnectivity is based on many variables. You must learn to recognize foundations within everything, regardless of your industry, or career or educational aspiration. The ability to see through the mountains of superficial variables of issues and opportunities must become a part of your entire character. The ability to see from the highest, furthest, deepest, and widest angles must be as natural as conversing with a friend. One small, beginning step to help guide you in this task but lifelong journey is to start with summarizing the foundation of things, e.g. the foundations of groups of words, as noted in the above image.

Start this beginner drill by examining each of the four rows of words. All of them relate to each other. Each row

is a collection of words that can be summarized by one of the words in each collection, each row. The ability to see the foundations within each of these collections, rows, of words here will help gauge, and further direct, your advancement in understanding and using Nature's system of Interconnectivity for holistic problem-solving in your own world.

While this article focuses on bringing your attention to the necessity and beginning of the journey to holism, to a vision and mindset based on Interconnectivity, the main concept at this moment with this drill is to force you to see things in a manner different from what you use every day when you navigate your surroundings in this world. Ergo, the answer to this drill is not given here. However, for those who want to begin their journey and practice this drill properly, send me your answers via the contact form on my website and inform on a time to discuss your results.

Photography: Joseph Rosales

There is far more to this world, both good and bad, than most people can ever even imagine throughout their entire lives. To see that “more” within the world you must be able to see how all things similar and seemingly unrelated are actually fluid and interconnected variables in this volatile system called existence, and how they all have extraordinary interplay and reactions amongst each other. This includes the universe/multiverse and your world, serial murders and sweater knitting, terrorists and confectionery, Beethoven's “An Die Freude” and Persian cats, Picasso's art and lawyer's closing arguments in courts, and an innumerable amount of other variables. The holistic problem-solving vision and mindset based on the power of Nature's system of Interconnectivity is what shows you what really is, and allows you to gain insight and benefit from everything so you can properly navigate and tremendously advance your own world.
